THE PROBLEM

MONEY VS LIFE

Having to decide if the cost of an ambulance ride is worth your life

THE SOLUTION

505 is an ambulance alternative that utilizes the same principles as UBER to request a high priority emergency lift that will cost a fraction of what an ambulance would.

WHY NOW?

The global pandemic further exposed how broken the health care system in America is. Currently patients biggest worry even when nearing their death beds is "who will pay for this?" or "How will I pay for this?"

HOW DOES IT WORK?

1 Request a ride by a willing and informed driver

Use the app or dial 505

HOW DOES IT WORK?

2 Pay a fraction of the price

On average a taxi ride will cost between \$10 to \$51 for 10 miles depending on the state.

As an incentive for the driver an extra \$5 dollar will be added to the fare.

The price may not exceed \$60

HOW DOES IT WORK?

3 **Worry about your health
and not your bank account**

BUSINESS MODEL

This service would act as a middle man between the drivers and the patients.

Funding will come through donations, and also from grants from foundations or state and federal governments.
