Usability Test - Prototype

User 1 - Aged 18, Female IBS-M

	Task Completed Quickly	Ease of Use	Observation Notes
Can you add a symptom update?		5/5	User completed the task quickly and easily
Can you get back to the homescreen?		5/5	User used the home button in navigation bar to return to the home screen
Find the settings screen		3/5	User didn't realise that they could scroll at first
Find the community screen		5/5	User tapped the community icon quickly and easily
Navigate to your saved posts		5/5	User tapped the "saved" button
Can you show me how you could add a post to the community page?		5/5	User said "I'm assuming it's the one with the little people" then tapped the community icon
Can you navigate to your profile within the app?		5/5	User hit the home button then tapped the profile photo fixed at the top of the screen
Can you add a food diary update, and then edit and save it?		5/5	User tapped the home button, then added and edited food diary easily
Can you find the statistics page, and then see if there is a way to review your food diary from there?		4/5	User struggled to see the "review" button without their glasses at first, because of the size on laptop screen
Start a conversation with the Doctor		5/5	User found the message icon quickly
Log a new bowel movement		5/5	User hit the home button, then logged a new bowel movement

Do you have any thoughts or comments?

"That was so exciting. It's very simple, and seems as though it includes all of the information you'd need to give. The communication with the Doctor is a really good option to have, and I really like it. I wish I actually had an app like this, because I find it super hard to speak to a Doctor about my symptoms."
